

Coges Telemetry

Full control of your machines

Monitor

Deliver only what's needed, when it's needed, with inventory monitoring and optimized route planning tool.

Plan

Get full oversight of your fleet and instant alerts to prevent downtime, fix problems early, and keep sales flowing.

Analyse

Use real-time data to stock the right products at the right price in the right locations.

Helps operators work smarter

By reducing machine downtime by up to 80% and cutting unnecessary site visits by 65%, it saves time, lowers costs, and improves overall efficiency. Fewer disruptions mean fewer headaches — and more time to focus on growing the business.

Real-time sales data & analytics

Access real-time sales data and insights across products, machines, and locations to see what's selling and where. Adjust pricing and restocking based on actual demand, and receive automated reports right in your inbox — daily, weekly, or monthly.

Alerts & preventative maintenance

Use remote tools to check what's wrong without going on-site. Get alerts right away if a machine goes offline, a part breaks, or the temperature changes. Fix problems early to avoid lost sales and expensive repairs.

Stock & ingredient management

See which machines are full or running low — especially during busy days or events. Track expiry dates, spot slow sellers, test new ones, and manage warehouse stock to avoid waste.

Unified payment management

Get a full view of all transactions — cash, cashless, digital, and loyalty — across your entire fleet. Monitor payment devices in real time, push refunds in seconds, and generate collection reports with ease.

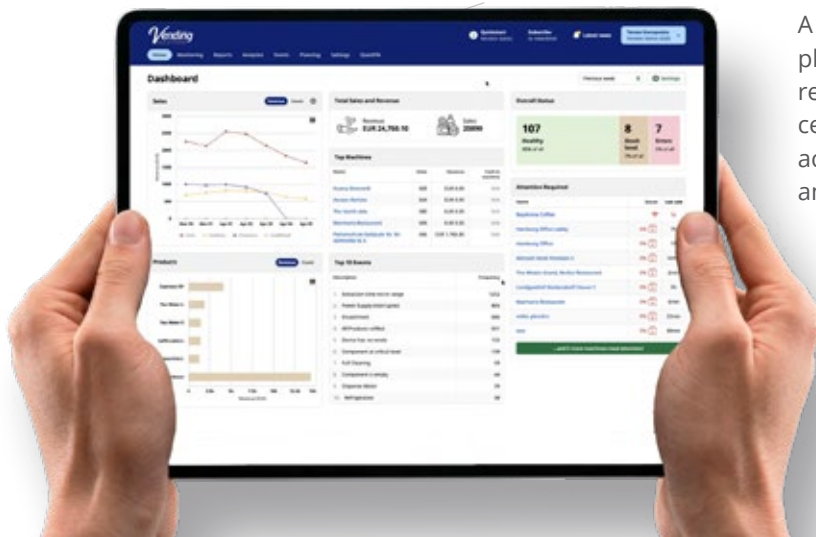

Route optimization & pre-kitting

Send your team only where it's needed. Use real-time data to skip low-sales machines, cut fuel and labour costs, and plan the best route. Pre-kitting makes restocking faster — pack only what each machine needs, nothing extra.

Fleet & downtime monitoring

Know when something's wrong before your customers do. Get real-time alerts like power loss, coin jams, or expired products. See which machines are offline and fix problems fast. Manage everything remotely from one platform.

COGES

A single software platform that provides real-time visibility and centralized control across machine fleets and daily operations.
